Why Should Non-Profits Invest in EHR Technology?

5 WAYS EHRs CREATE VALUE
FOR NON-PROFIT ORGANIZATIONS

The evolution and adoption of health information technology (HIT) has helped healthcare providers and hospitals see great advancements in the way they manage and deliver care to patients around the world. HIT has also contributed to the increased use and widespread advocacy of qualified electronic health records (EHRs). New incentive programs help encourage the meaningful use of EHR technology by eligible professionals and hospitals, but some non-profit organizations still have yet to implement an EHR or upgrade to the latest technology available.

Because many non-profits possess limited resources, it may seem that large amounts of time, energy and funds are required to implement an advanced EHR solution. But finding the resources to leave behind paper records and invest in the right EHR provider will bring about countless new efficiencies that will benefit both non-profits and the communities they serve.

1

Add service lines and meet new business models

A holistic view of your consumers across programs will allow you to identify and address gaps in care coordination and services, giving your non-profit the chance to enhance a limited business model.

2

Decrease spend and human error

Adopting a paperless process will eliminate the cost and inevitable human error associated with paper records. It will also increase the availability of information for all staff members.

3

Increase staff efficiency

Utilizing one integrated, enterprise-wide system in which information is only entered once will increase the efficiency of staff and allow for a stronger collective focus on care delivery.

5 BIG BENEFITS

4

Enable better consumer outcomes

An EHR lets you easily and securely interface with other provider organizations and clients, helping to improve the care experiences and outcomes for those you serve.

THAT AN EHR CAN PROVIDE A NON-PROFIT ORGANIZATION

5

Monitor agency progress and make better decisions

Easy access to reports, dashboards and other important information can help facilitate smart and data-driven decision-making while keeping staff connected and "in the know."

Is your non-profit organization still operating on the inaccuracies of paper records? Partner with an experienced EHR provider to add value to your organization and deliver unmatched care.
